## Assignment 2

For plain vanilla calls and puts, implement the following option pricing methods:

• Basic requirement (80 points):

```
Black-Scholes formulas (for European options)

Monte Carlo simulation (for European options)

CRR binomial tree model (for both European and American options)
```

(Inputs:  $S_0$ , K, r, q,  $\sigma$ , T, number of simulations, number of repetitions, n. Outputs: Option values for all methods and 95% confidence interval for Monte Carlo simulation.)

- Bonus 1 (5 points):

  Implement the CRR binomial tree with one column vector.
- Bonus 2 (5 points):

  Implement the combinatorial method to price European options.
